

19 November 2025

To Whom It May Concern,

The International Brain Research Organization (IBRO) hereby confirms its support for the following research project funded under the IBRO Neuroscience Capacity Accelerator for Mental Health (NCAMH) program:

Project leader: Dr. Huong Thi Thanh Ha (International University, Vietnam)

Project collaborators: Dr. Hieu Huy Pham (VinUniversity, Vietnam); Dr. Duy Le (Royal Melbourne Institute of Technology, Vietnam)

Project title: *Neuroplasticity Tracking During Intervention for Depression and Anxiety: A Longitudinal, Cognitive-guided Digital Phenotyping Study*

IBRO confirms that the financial support provided under the NCAMH program is dedicated exclusively to scientific research, training, and academic activities. The funding:

- does **not** constitute capital investment, commercial activity, or any form of profit-oriented financing;
- is awarded solely to advance scientific objectives in neuroscience and mental health research; and
- does **not** require repayment upon completion of the project.

Importantly, **IBRO confirms that this funding does *not* constitute Official Development Assistance (ODA)**. It does not originate from governmental development-aid mechanisms, concessional finance, or bilateral/multilateral aid programs.

We trust that this clarification will support the administrative processing and implementation of the project.

With kind regards,

Lars Kristiansen
Executive Manager
